

## Information and Knowledge Management (IN2105)

## Case 1

Group 1:

Finnigan Lutz

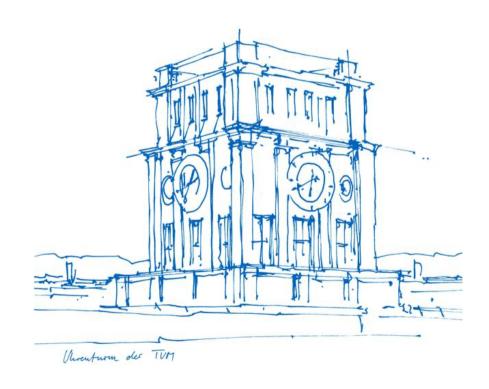

Alina Intelmann

Jitka Drapalikova

Hermann Groz

Jonathan Schulze

Technische Universität München München, 20. November 2020

## Introduction

### Outline:

- > Introduction
- Presentation of taxonomy
- Performance measures
- Influencing factors
- Level of measurement
- Example of SMART BSC

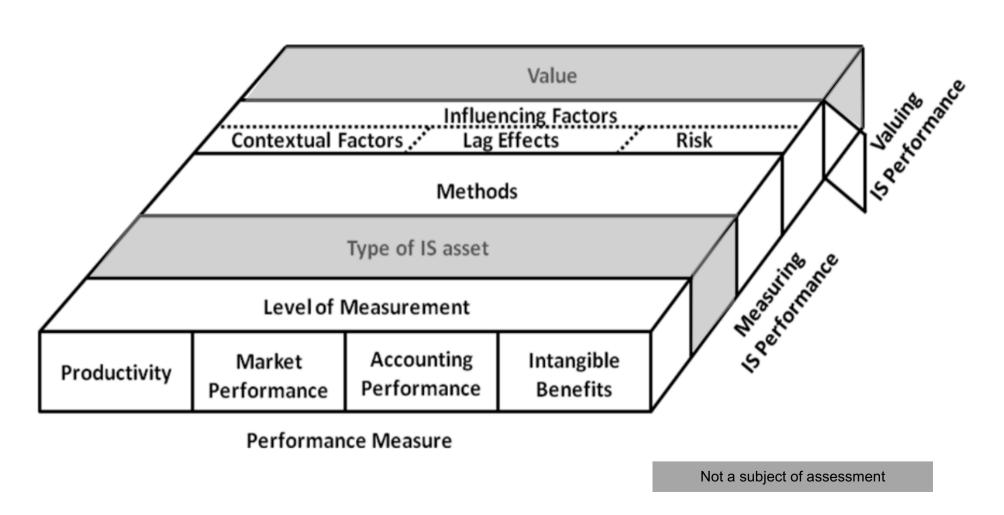

### **Key facts:**

- 227 acquisitions until today (2020)
- ➤ Acquisition process of Video Solutions Group – from 2012 to 2014
- ➤ 4 phases of acquisition process (Preacquisition preparation, Acquisition selection, Acquisition Integration, Postintegration Management)
- An understanding of the VS's EA is built progressively over time

# **Taxonomy**

## Performance Measure

- Service Level Agreements
- Quality of Service
- Improved Security
- Cisco could offer better support to existing customers, but lost a share

- Market reaction for strategic acquisitions
- Size and time lag effects
- Geographical diversification could lead to growth opportunity in the future

5

## Performance Measure

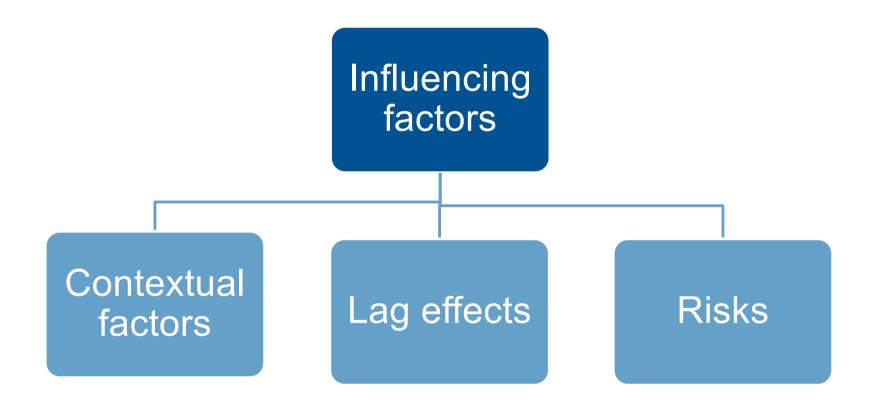

Accounting performance

- Synergy effects can lead to lower cost and growth in turnover
- Effects depend on level of integration
- Cisco's acquisition only realized some cost synergies but increased revenue by new combined offers
- Difficult to quantify results
- Knowledge transfer from VS to Cisco includes security solution and individualized service offerings
- Competitive advantages through geographical diversification effects

# Influencing factors I

# Influencing factors II

# Influencing factors Contextual factors Lag effects Risks

#### Risks

- Wrong perception of a target company
- Reduced by:
  - Extensive preparation phase (ready to acquire, right target, threats and opportunities)
  - Well done post-integration management -> addressing inefficiencies from integration

### Lag effect

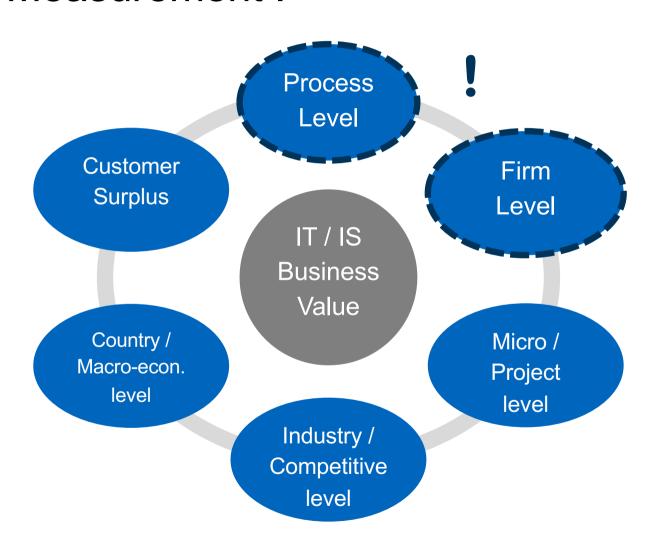

- Left out in the paper, but focus on time-based performance measures
- Emphasis on long term profitability

### Contextual factors

- Influence from risk mitigation activities (mentioned above)
- Ongoing transformation and project <- align (fewer changes required later)</li>
- Geographical market diversification -> target present in Asia
- Valuable know-how and products target's security product
- Different delivery systems and customized solutions => extra cost to unify

## Level of Measurement I

Schryen(2010)

## Level of Measurement II

- 4-Step acquisition process (Time-to-Orderability)
- Impact on operational capabilities at Cisco

Process Level

IT / IS Business Value

- Relation to ongoing transformation processes
- Cross-functional integration teams

Country /
Macro-econ.
level

Micro / Project level

- State of economy
- Recession / boom
- Large trade deals

## Level of Measurement III

- Surveys / customer feedback / NPS score
- Additional offerings / added value

Customer Surplus

> IT / IS Business Value

> > Shifts in Business-IT AlignmentOrganizational restructuring

 Organizational restructuring level (integration clashes due to 179 acquired Business Units since 1984 → no R&D Division)

Acquired Business Unit level

Firm Learnings

Firm

Level

- Key competencies gained
- Competitiveness measures (growth, market share etc)
- Industry performance measures

Industry /
Competitive
level

# Simple Multi Attribute Rating Technique (SMART)

			Project	
	Criterion	Weight	1 (Paper)	2 (Other)
1	Technology and product gain	20%	90	70
2	Reliability	20%	80	60
3	Organizational fit	20%	70	80
4	Strategic fit	15%	60	40
5	Market share effect	10%	70	70
6	Transformational effect	10%	40	60
7	Geographic diversification	5%	20	50
	Totals		69/100	63.5/100

# **Backup Questions**

- 1. Why are IT investments not always directly reflected in shareholder returns?
- 2. How could Cisco measure performance improvements after the VS acquisition?
- 3. Why Cisco puts such a big emphasis on an acquisition preparation phase and postintegration management?
- 4. What other contextual factors may influence Cisco's case?
- 5. Why are the "Process" and "Firm" levels of measurement so important to Cisco?
- 6. What can be gained from making measurements at the "Country" level?
